CISE - Information and Database Systems 1

The database tables have the following semantics: SIGHTINGS gives information that describes every time that a member of the club observes one of the wildflowers described in the table FLOWERS. NAME tells the name of the flower observed, PERSON describes who saw the flower, LOCATION tells the name of a nearby geographical feature where the flower was seen, and SIGHTED tells the day when the ...

CISE - Information and Database Systems 1

The database tables have the following semantics: PEAK gives information about the mountain peaks that the SPCC is interested in. This table lists the name of each peak, its elevation, its difficulty level for climbers (on a scale of 1 to 5), the map that it is located on, and the region of the Sierra Nevada that it is located in.

Assignment 2 - CISE - Information and Database Systems 1

Test Cases To test your code, you should run it using the data files items.dat and trans.dat.Note that these files are somewhat updated compared to the data files that were posted in the zip file that you downloaded in order to begin on the assignment, so you should clear out your database and re-run your code with these new files in order to test your code and prepare the turnin.
