In Myers, Classical and Modern Regression with Applications (Duxbury Classic Series, 2nd edition, 1990), an experiment is described in which the Environmental Protection Agency seeks to determine the effect of two water treatment methods on magnesium uptake. Magnesium levels in grams per cubic centimeter (cc) are measured, and two different time levels are incorporated into the experiment.

Putting Them All Together: The Classical Linear Regression Model The assumptions 1. - 4. can be all true, all false, or some true and others false. They are not connected. But when they are all true, and when the function $f(x; \beta)$ is linear in the values so that $f(x; \beta) = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_k x_k$, you have the classical regression model
