Fractures Of The Mandible

Mandibular fracture, also known as fracture of the jaw, is a break through the mandibular bone. In about 60% of cases the break occurs in two places. It may result in a decreased ability to fully open the mouth. Often the teeth will not feel properly aligned or there may be bleeding of the gums.

Mandibular fracture - Wikipedia

A mandible fracture is similar to a bone fracture in any another area of the body. The bone becomes stressed, usually from excessive force, and breaks under that pressure. The first step in the diagnosis is taking a dental X-ray (also known as a radiograph) to measure the presence and severity of the crack, split or complete break.
