

## Linear Algebra Exam 1 Solutions

Eventually, you will categorically discover a further experience and ability by spending more cash. yet when? realize you assume that you require to acquire those every needs afterward having significantly cash? Why don't you try to get something basic in the beginning? That's something that will lead you to understand even more approaching the globe, experience, some places, similar to history, amusement, and a lot more?

It is your unconditionally own grow old to work reviewing habit. in the middle of guides you could enjoy now is **linear algebra exam 1 solutions** below.

Bootastik's free Kindle books have links to where you can download them, like on Amazon, iTunes, Barnes & Noble, etc., as well as a full description of the book.

### Linear Algebra Exam 1 Solutions

Linear Algebra - Exam 1 Solutions 1. Is the vector  $\begin{bmatrix} 2 \\ 4 \\ 1 \\ 2 \\ 1 \\ 3 \\ 5 \end{bmatrix}$  a linear combination of the vectors  $\begin{bmatrix} 2 \\ 4 \\ 1 \\ 1 \\ 1 \\ 3 \\ 5 \end{bmatrix}$ ;  $\begin{bmatrix} 2 \\ 4 \\ 2 \\ 2 \\ 1 \\ 3 \\ 5 \end{bmatrix}$ ;  $\begin{bmatrix} 2 \\ 4 \\ 1 \\ 1 \\ 2 \\ 3 \\ 5 \end{bmatrix}$ ? Why or why not? (8 pts) No. We need to check if there are constants  $x, y, z$  such that  $\begin{bmatrix} 2 \\ 4 \\ 1 \\ 2 \\ 1 \\ 3 \\ 5 \end{bmatrix} = x \begin{bmatrix} 2 \\ 4 \\ 1 \\ 1 \\ 1 \\ 3 \\ 5 \end{bmatrix} + y \begin{bmatrix} 2 \\ 4 \\ 2 \\ 2 \\ 1 \\ 3 \\ 5 \end{bmatrix} + z \begin{bmatrix} 2 \\ 4 \\ 1 \\ 1 \\ 2 \\ 3 \\ 5 \end{bmatrix}$ . This gives us the system of equations  $x + 2y + z = 1$ ;  $x + 2y + z = 2$ ;  $x + y + 2z = 1$ . This system has no solutions as  $x + 2y + z$  cannot equal both 1 and 2.

### Linear Algebra - Exam 1 Solutions - OU Math

Exam 1, Solutions 1. Let  $T: \mathbb{R}^3 \rightarrow \mathbb{R}^4$  be the linear transformation with  $T(\tilde{e}_1) = 2\tilde{e}_1 + \tilde{e}_2 + 3\tilde{e}_3 - 4\tilde{e}_4$ ,  $T(\tilde{e}_2) = \tilde{e}_1 - \tilde{e}_2 + 2\tilde{e}_3 + 6\tilde{e}_4$ , and  $T(\tilde{e}_3) = 4\tilde{e}_1 - \tilde{e}_2 + 7\tilde{e}_3 + 8\tilde{e}_4$ . (a) (6 points) Write the standard matrix for  $T$ . Denote this matrix  $A$ . Answer: Since it's a transformation  $\mathbb{R}^3 \rightarrow \mathbb{R}^4$ , the matrix needs to be  $4 \times 3$ . It is:  $A = \begin{bmatrix} 2 & 1 & 4 \\ 1 & -1 & -1 \\ 3 & 2 & 7 \\ -4 & 6 & 8 \end{bmatrix}$  ...

### MATH15a: Linear Algebra Exam 1, Solutions

Linear Algebra Exam 1 Solutions This is likewise one of the factors by obtaining the soft documents of this Linear Algebra Exam 1 Solutions by online. You might not require more times to spend to go to the books initiation as with ease as search for them. In some cases, you likewise accomplish not discover the proclamation Linear Algebra Exam 1 ...

### [MOBI] Linear Algebra Exam 1 Solutions

$V$  is determined by a single linear equation in  $\mathbb{R}^4$ . Hence the set of solutions is a  $4 - 1 = 3$ -dimensional space. Hence  $\dim(V) = 3$ . (b) Construct a linear transformation  $T: \mathbb{R}^3 \rightarrow \mathbb{R}^4$ ,  $T(x) = Ax$ , where  $V = \text{im}(A)$ . Then use  $A$  to construct a basis for  $\text{im}(A)$ . You will need to verify that what you have is a basis.

Question 1.1. Consider the following system of equations:  $x_1 + x_3 = 3$   $x_1 + x_2 + x_3 = 1$   $x_1 + x_2 = 4$  The above system of linear equations is: A inconsistent B consistent with infinitely many solutions C consistent with a unique solution D None of the above ANSWER: C. Row reduction gives a pivot in every row so there is a solution. Moreover,

**Exams | Linear Algebra | Mathematics | MIT OpenCourseWare**

Solution: The characteristic polynomial is  $(4 - \lambda)^2(2 - \lambda)^2$ , so the eigenvalues are 4,2, each with multiplicity 2. The matrix will therefore be diagonalizable if each eigenspace has dimension 2.  $A - 2I$ ,  $A - 4I$  each have rank 2, so the nullspaces have the required dimension.
