Using PVC valves to control water in a system is not difficult and can be extremely rewarding when done correctly. These valves are especially useful in home irrigation & gardening systems, homemade fish tanking piping, and other such home applications.

### **Common Butterfly Valve Applications - A Beginner's Guide**

A typical flanged butterfly valve is illustrated in Fig. A. Butterfly valves are produced in sizes ranging from NPS 1½ (DN 40) to over NPS 200 (DN 5000). They are usually manufactured in flanged, wafer, and lug, or single-flange-type designs. The welding-end style is a specially engineered valve for a specific application.

One-piece ball valves are installed as a unit. The retainer holds the ball and seal. Compression of the seal is controlled by increasing or decreasing the tightness of the threading holding the retainer. A one-piece ball valve must balance the integrity of the seal against the friction between the ball and seal.
