Door open, turn key to ON, press and release the pushbutton 1 once, then press and hold it, (if the horn is connected it will honk once) then press the LOCK button (horn will honk once again), release the button, turn the key off and try it. If the horn or siren is not connected, thats ok, programming will still work.

Overall, the viper is the popular brand when it comes car alarm category in the market nowadays. Keep in mind that there are different models of viper alarms. It can be viper 211hv, viper 350 plus, viper 7345v, or viper 791xv, but the fact is you can still reset or program it using any of the solutions above.

The Viper 474v remote is sold with the 211HV keyless entry system here in New Zealand. It can also be programmed to work with the Viper 3100 alarm. The remote will work with a number of other Viper alarms which I've listed below. The remote has a green LED that flashes when any of the buttons are pressed.

Hi, does anyone have a manual for Viper rpn4711, believe this is a DEI model. The reason why I ask is because when I activate the alarm, it does not chirp, but rather, gives a Siren sound. And when I deactivate, it 'siren' twice. It's really bugging me and I don't know how to turn this back to a "Chirp" or in silent mode.
